control—The experience gathered in applications (V. Smutny, V. Hlavác, T. Pajdla and P. Palatka).

XVII. Simulation and design. Integration of manufacturing system and project design with DMU (S. Praun). Development of a feature-based computer-assisted fixturing system (G.M. Pereira and G.D. Cunha).

XVIII. Theoretical aspects of design. A contribution to algebraic approach for a CAD/CAPP specification (J.A. Rosas and G.D. Putnik). Interactive design of integrated systems (J.R. Silva). Human integration and participation in time constraint workshops with limiting transportation resources (S.C. Dutilleul and F. Chetouane).

XIX. Workshop 1: Soft-compuiting for automation (Organized by P. Horácek and S. Chiu). Object-oriented implementation of fuzzy logic systems (R. Belohlávek, A. Dvorák, D. Jedelský and V. Novák). Scheduling the arrivals in a no-wait flowshop with fuzzy processing times (V. Bourgade and A. Oulamara). Fuzzy approximation of the functions minimum and maximum (B. Sládek). Fuzzy knowledge-based prediction of yeast's morphological characteristics for sparkling wine manufacturing (S. Vassileva).

XX. Workshop 2: Multi-agent systems (Organized by E. Oliveira and O. Stepanková). Problems of learning in multi-agent systems (L. Lhotská, J. Klema and O. Stepanková). User interface for multi-agent systems: A case study (J.M. Fonseca, A. Steiger-Garção and E. Oliveira).

Feature Extraction, Construction and Selection: A Data Mining Perspective. Edited by Huan Liu and Hiroshi Motoda. Kluwer Academic Publishers, Boston, MA. (1998). 410 pages. $140.00, NLG 320.00, GBP 95.25.

Contents:

Preface. Acknowledgments. Contributing authors.

I. Background and foundation. 1. Less is more (Huan Liu and Hiroshi Motoda). 2. Feature weighting for lazy learning algorithms (David W. Aha). 3. The wrapper approach (Ron Kohavi and George H. John). 4. Data-driven constructive induction: Methodology and applications (Eric Bloedorn and Ryszard S. Michalski).

II. Subset selection. 5. Selecting features by vertical compactness of data (Ke Wang and Suman Sundaresh). 6. Relevance approach to feature subset selection (Hui Wang, David Bell and Fionn Murtagh). 7. Novel methods for feature subset selection with respect to problem knowledge (Pavel Pudil and Jana Novovičová). 8. Feature subset selection using a genetic algorithm (Jihoon Yang and Vasant Honavar). 9. A relevancy filter for constructive induction (Nada Lavrač, Dragan Gamberger and Peter Turney).

III. Feature extraction. 10. Lexical contextual relations for the unsupervised discovery of texts features (Patrich Perrin and Fred Petry). 11. Integrated feature extraction using adaptive wavelets (Yvette Mallet, Olivier de Vel and Danny Coomans). 12. Feature extraction via neural networks (Rudy Setiono and Huan Liu). 13. Using lattice-based framework as a tool for feature extraction (E. Mephu Nguifo and P. Njiwoua). 14. Constructive function approximation (Paul E. Utgoff and Doina Precup).

IV. Feature construction. 15. A comparison of constructing different types of new feature for decision tree learning (Zijian Zheng). 16. Constructive induction: Covering attribute spectrum (Yuh-Jyh Hu). 17. Feature construction using fragmentary knowledge (Steve Donoho and Larry Rendell). 18. Constructive induction on continuous spaces (João Gama and Pavel Brazdil).

V. Combined approaches. 19. Evolutionary feature space transformation (Haleh Vafaie and Kenneth De Jong). 20. Feature transformation by function decomposition (Blaž Zupan, Marko Bohanec, Janez Demšar and Ivan Bratko). 21. Constructive induction of Cartesian product attributes (Michael J. Pazzani). 22. Towards automatic fractal feature extraction for image recognition (Matteo Baldoni, Cristina Baroglio, Davide Cavagnino and Lorenza Saitta). 23. Feature transformation strategies for a robot learning problem (Luis Seabra Lopes and Luis M. Camarinha-Matos). 24. Interactive genetic algorithm based feature selection and its application to marketing data analysis (Takao Terano and Yoko Ishino). Index.

Fuzzy Logic in Data Modeling: Semantics, Constraints, and Database Design. By Guoquin Chen. Kluwer Academic Publishers, Boston, MA. (1998). 224 pages. $115.00, NLG 260.00, GBP 78.25.

Contents:

Preface. Acknowledgements. I. Basic concepts. 1. The relational data model. 2. Conceptual modeling with the entity-relationship model. 3. Fuzzy logic. II. Fuzzy conceptual modeling. 4. Fuzzy ER concepts. 5. Fuzzy EER concepts. III. Representation of fuzzy data and constraints. 6. Fuzzy data representation. 7. Fuzzy functional dependencies (FFDs) as integrity constraints. 8. A FFD inference system. IV. Fuzzy database design and information maintenance. 9. Scheme decomposition and information maintenance. 10. Design of fuzzy databases to avoid update anomalies. Bibliography. Appendices. A. List of examples. B. List of definitions. C. List of theorems. D. List of lemmas. E. List of algorithms. Index.

Semidistributive Modules and Rings. By Askar A. Tuganbaev. Kluwer Academic Publishers, Dordrecht. (1998). 352 pages. $157.00, NLG 290.00, GBP 99.00.

Contents:

Introduction. Symbols. 1. Radicals, local and semisimple modules. 2. Projective and injective modules. 3. Bezout and regular modules. 4. Continuous and finite-dimensional modules. 5. Rings of quotients. 6. Flat modules and semiperfect rings. 7. Semihereditary and invariant rings. 8. Endomorphism rings. 9. Distributive rings with maximum conditions. 10. Self-injective and skew-injective rings. 11. Semidistributive and serial rings. 12. Monoid rings and related topics. Bibliography. Index.
